

*Total Trunk Capacity: 19.5 cubic feet!*

# Customer-Installed TRUNK EXPANSION KIT

The combination of the standard trunk sump with a customer-installed Trunk Expansion Kit brings the total trunk capacity to 19.5 cubic feet, comparable to any livery vehicle.

The battery and power distribution center have been relocated inside the trunk on the passenger side.

A matching cover is easily removed for access when necessary.

...and when in place, it discreetly hides and protects the components.

*Only  
\$199.00*

- OEM-matching battery cover
- matching trunk well liner material
- battery tray
- installation hardware
- instruction packet

*Available only for Chrysler 300 LWB Models*
